Quick switch tables

#LASER TABLES

Adapted for

Enhance the positioning of objects to be engraved and the cutting quality

Key feature

Change work tables as you go without tools to keep up with your production needs

- With 5 different tables, there is a suitable table for every use of LightSpeed machines: from precision engraving to perfect cutting.
- Thanks to Quick Switch technology, you can change work tables in an instant with quick magnetic positioning. No original settings or table height adjustments are necessary, saving you time. You can change tables as often as you like to enjoy their many benefits without risking errors.
- The Quick Switch system tables are designed to take full advantage of LightSpeed machine optimizations for airflow management. Fume extraction and air assistance then operate with the same performance across the entire set of available work tables.

Gravogrip™ sheets

For working with highly flexible materials such as paper or cloth, the Gravogrip™ silicone backing guarantees ideal support and flatness. Sheets size: 610 x 305 mm

Ref. XXXXX

Rotary device

#TAG

Adapted for

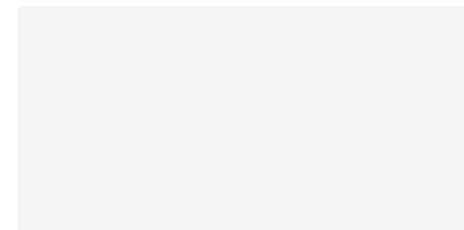

Engraving cylindrical or conical objects

Key feature

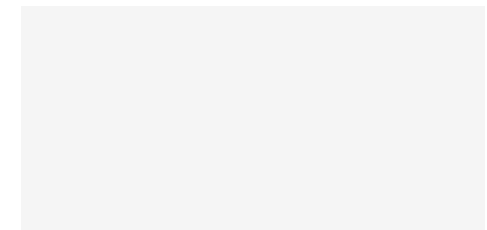

Converts the Y-axis into rotary motion

- Easy and fast installation : In less than 30 seconds, connect your rotary device inside the engraving area and start engraving bottles, mugs, etc.
- For LightSpeed machines, the rotary device does not prevent normal use of the Y axis: flat engraving can therefore still be performed with the rotary device installed. The engraving area is still reduced.
- Completely cylindrical objects are rare; engraving often involves following a curve or angle. The rotary device allows objects to be tilted so that the area to be engraved is always horizontal.

Cones

With the 6 cones provided, any cylindrical object can be easily secured and engraved.

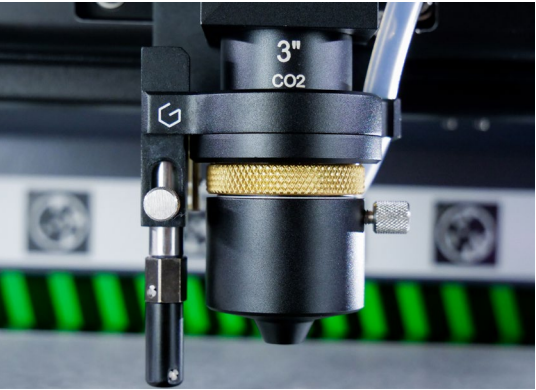

Small Item adaptor

This adapter for small items is perfect for personalizing gift items such as bracelets and cups.

Lens cleaning kit

This kit contains everything you need to clean your lenses: cleaning solution, wipes, and cotton swabs.
Ref. 26327

Other accessories

Air compressor

The air compressor is an essential accessory for workshops that do not have a general air system. Integrated directly into the machine at the factory, it supplies the air assistance system during engraving and cutting without the need for an external connection.

Wifi dongle

A WiFi network connection key, this accessory allows you to connect your laser machine to a wireless network without using an Ethernet cable.

Emergency stop button

This accessory, highly appreciated by industries, allows you to add an emergency stop button to LightSpeed machine. With its magnetic mount, it can be placed anywhere directly on the machine or on a nearby metal surface.

Laser exhaust systems

#LASER EXHAUST SYSTEM

Adapted for

Maintaining a clean and safe work environment, free from laser produced fumes

Max. air flow rate

400m³/h

- Dedicated exhaust system designed to also support your LightSpeed machine.
- With the “Easy integration exhaust” feature, the connection to the laser machine is made without any visible pipes.
- Ideal system for medium and large volume production or cutting work involving materials that emit a lot of smoke, such as rubber stamps, wood, or acrylic.
